TailWell2 complete kit	214260
------------------------	--------

The logical further development of the successful model from New Zealand:

Developed to make the arduous work involved with cutting hair on the tails of dairy cows easier. The removal of cow tail hair soiled with dung and urine is important for ensuring maximum hygiene of the herd, the milk and the milker. The cow tail hair should be shorn twice a year to ensure the best milk quality. TailWell® Power Tail Trimmer fits into almost all battery-powered screwdriver (at least 14 Volt) that rotates at a speed of around 1,250 rpm. TailWell2® Power Tail Trimmer is quiet in operation and produces a smooth cut. It takes no more than 4 seconds per tail and can easily be carried out during the milking process. It works on the principle of an outer blade rotating around an inner one, therefore there is no risk of injury to the animal or the operator.

- fits virtually all battery-powered screwdrivers operating at 14 Volt, 1,250 rpm
- removes all tail hair in seconds, even hair completely matted with dung and dirt
- now even easier to sharpen with a specially developed sharpening paste
- supplied in a handy plastic case for safe storage
- includes DVD and handbook
